- Single-stage centrifugal
- Head up to 56m
- Flow rates up to 18l/s
- Semi-open impeller, mechanical seal
- Closed impeller packed-gland seal
- Mechanical seal option

Uniflo pumps are the robust and inexpensive solution for virtually any industrial, agricultural or domestic pumping application.

This inexpensive range of general purpose centrifugal pumps is designed in South Africa to operate in extremely tough conditions. The pumps' inherent go-anywhere, pump-anything characteristics have also made them firm favourites in many countries throughout the world.

The Uniflo A and B ranges are suitable for small irrigation schemes, milk cooler circulation, automatic pressure systems and swimming pool filtration. The A Range is equipped with a 95mm single-groove pulley and the heavy-duty B Range incorporates a pre-greased ball bearing for versatility.

Comprehensive aftermarket support for the Uniflo A and B ranges is available through Howden Pumps' countrywide network of branches and distributors.
